UST   has partnered with SAP so that it can provide its customers the best   ERP technology and a wide range of industry specific solutions including   business intelligence and enterprise integration. UST is a SAP Consulting Service Partner having collaborated with SAP on several implementation projects. SAP's technology leadership combined with UST's   value added consulting creates a powerful value proposition for any   organization implementing ERP solutions.

Being a SAP business partner gives us the advantage of having access   to the Partner Portal, have access to the latest software   upgrades/revisions, opportunity to work with pre-release versions of the   software, participating in beta testing programs and participating in   joint pre-sales efforts. In addition, as a Partner UST can help its   clients with price quotes for software licensing and act as a one stop   shop for all SAP software and services including training and   consulting.
